Subham Mohanty

Java Backend Engineer | Spring Boot | Fintech & Payment Systems
+91-9348228772 | mohantysubham853@gmail.com | LinkedIn | GitHub | LeetCode

Professional Summary

Java Backend Engineer building production-grade fintech and payment systems using Java, Spring Boot, PostgreSQL, Redis, and Google Cloud. Built and integrated **10+ BBPS biller microservices** handling approximately **100K bill-fetch requests and 20K–50K bill payments daily per biller**. Experienced in payment orchestration, AutoPay, ISO 8583, HSM-backed cryptography, TR-31 key exchange, asynchronous processing and event-driven payment workflows using Google Cloud Pub/Sub.

Technical Expertise

Languages: Java, SQL
Backend: Spring Boot, Spring Data JPA, REST APIs, Microservices
Databases & Caching: PostgreSQL, Redis
Cloud & DevOps: Google Cloud Platform, Pub/Sub, BigQuery, Cloud Logging, Secret Manager
Payment & Security: ISO 8583, HSM, TR-31, ZPK/ZAK, AES, RSA, SSL/TLS, JKS
Developer Tools: Git, IntelliJ IDEA, Spring Tool Suite, VS Code, Postman, TablePlus

Professional Experience

Java Backend Engineer Jan 2025 – Present
IServeU, Bhubaneswar, Odisha

Bank of Baroda BBPS COU

- Engineered **AutoPay scheduling and payment workflows** with duplicate bill-fetch and payment prevention, reducing **duplicate payment processing by 95%**.
- Designed an asynchronous **Google Cloud Pub/Sub retry pipeline** for debit and switch failures, improving AutoPay transaction success rates by **15%**.
- Built a bulk notification engine processing **500K+ customer records** using paginated database reads and bank SMS/Email APIs, enabling high-volume customer communication with low memory consumption.
- Integrated **transit and tourism bill-payment categories** into the Bank of Baroda platform, expanding centralized bill-payment coverage; the launch was showcased at **Global Fintech Fest 2026**.

Bank of Baroda BBPS BOU

- Built and integrated **10+ payment biller microservices** with token-based authentication, SSL/TLS communication, AES/RSA encryption and decryption, and JKS-based certificate management; handled approximately **100K bill-fetch requests and 20K–50K bill payments daily per biller**.
- Implemented **Redis-based token caching** for biller-API authentication with an asynchronous refresh flow that regenerates the token in the background on expiry or invalidation, cutting token-expiry-related transaction failures by **20%** with minimal impact on in-flight requests.
- Engineered distributed payment orchestration with idempotency validation, asynchronous processing, retry handling, conditional switch invocation, and centralized exception handling, reducing failed-transaction manual intervention by **30%** and added UUID-based distributed tracing.
- Built a Google Cloud **Pub/Sub-to-BigQuery ingestion pipeline** implementing Base64 decoding, JSON transformation, and schema mapping, cutting compliance report turnaround time by **25%**.
- Built an **offline biller payment service** that ingests bulk bill data from biller-uploaded Excel files instead of live biller-API calls, persisting parsed records to the database and marking bills paid in real time as NPCI-routed user payment requests arrive at the biller service.

mATM

- Developed secure mATM integrations for **IPPB and NSDL Payments Bank**, supporting approximately **30K transactions per category** across each banking platform.
- Integrated **AWS HSM** for PIN verification and cryptographic operations aligned with **ISO 8583** payment messaging and secure transaction processing.
- Implemented **TR-31 compliant ZPK/ZAK key exchange** and cryptographic key-management workflows for secure PIN-based transaction processing.

Education

Master of Computer Applications (MCA) 2023 – 2025
Veer Surendra Sai University of Technology, Odisha **CGPA: 9.22**

Bachelor of Computer Applications (BCA) 2020 – 2023
Rourkela Institute of Management Studies, Odisha **CGPA: 8.67**
